

# Replace Your PRI with Airband VoIP Trunking Service and Save

Are you looking for ways to reduce voice expenses to meet your business objectives? Voice Over IP (VoIP) is one way you can start lowering your costs by leveraging your Internet connection for your voice services. All you have to do is to replace your existing PRI with Airband's VoIP Trunks. Your current phone system, its features and functionality will remain the same while you enjoy lower monthly service rates.

**Why Airband Can Reduce Your Expenses:** Airband's voice and data services are provided over one efficient network connection, so you don't have to maintain and pay for separate circuits for voice and data. Through our integrated access, last mile network, your bandwidth is dynamically allocated between voice and data traffic to optimize utilization and eliminate waste.

**Private IP Network That Ensures Service Quality:** Airband's VoIP Trunking service is delivered on our private IP and wholly owned last-mile fixed wireless network, so your voice traffic is not carried across the Public Internet where quality of service cannot be guaranteed.

**Service Level Guarantee:** Airband provides a unified service level agreement that covers availability, packet loss, latency, and jitter.

**Unmatched Scalability:** As you add employees, additional VoIP trunks can be easily provisioned. You are not restricted to buying 23 channels at a time as VoIP trunks can be added in single increments. Airband can also adjust your Internet bandwidth to accommodate your voice and data requirements on an as needed basis.

**Support You Can Count On:** Your voice and data network will be monitored by our Network Operations Center 24x7. Our support staff is also available to help you 24x7.
