

# VoIP / SIP Trunking

## A Cost Effective PRI Replacement or SIP Connectivity Solution

Are you looking for ways to reduce voice expenses to meet your business objectives? Voice Over IP (VoIP) is one way you can start lowering your costs by leveraging your Internet connection for your voice services. All you have to do is to replace your existing PRI or SIP service with Airband's VoIP Trunks. Your current phone system, its features and functionality will remain the same while you enjoy lower monthly service rates.

**Airband Can Reduce Your Expenses:** Airband's voice and data services are delivered over one efficient network connection, so you don't have to maintain and pay for separate circuits for voice and data.

**Optimize Bandwidth Usage:** with integrated voice and data access, bandwidth can be dynamically allocated between voice and data traffic to help avoid waste.

**Service Level Guarantee:** Airband provides a unified service level agreement that covers availability, packet loss, latency, and jitter.

**Buy Just What You Need:** As you add employees, additional VoIP trunks can be easily provisioned. Unlike traditional PRI's, you are not restricted to buying 23 channels at a time. Airband can also adjust your Internet bandwidth to accommodate your voice and data requirements on an as needed basis.

**Support You Can Count On:** Your voice and data network will be monitored by our Network Operations Center 24x7. Our support staff is also available to help you 24x7.

### Standard IP Trunking Package

- Minimum of 5 VoIP Trunk bundled with 2 Mbps of Internet access
- 200 domestic long distance minutes included per trunk
