

Hosted Voice over IP Services

Level the playing field for your business

Want more voice service capabilities for your business? With Airband, more is what you'll get. Airband levels the playing field for small to mid-sized businesses by giving you the same advanced functionality employed by Fortune 500 companies at prices you can afford.

Airband eliminates the daily hassles associated with managing on-site phone systems, freeing up your resources to focus on more strategic initiatives. With a hosted solution, you save both money and time – especially when you need to add users or make changes to your service. Airband's web portal empowers administrators to manage their services on their schedules with the changes taking effect immediately.

Lower Cost of Ownership: Eliminate the headaches and cost associated with maintaining an onsite phone system without giving up the control. Moves, adds and changes are just a mouse click away and they take minutes to take effect.

Scalability: Think about where you were two years ago and ask yourself where you'll be two years from now. Airband has a solution you'll never outgrow with technology and equipment that handles 20 employees per location as easily as 200. With Airband you are not bound by T1 increments for bandwidth – you can get exactly what you need, in a matter of days.

Enhanced Productivity: Now that voice is data, the line between the functionality of the phone and computer is blurred. With our integrated call control toolbar, users can manage their services from their desktop, saving you time and resources. You can also take advantage of our call center applications to get the robust functionality you need at a fraction of the cost.

Reliability: Airband's network provides you with the geographic redundancy and network capacity needed to keep your services and your business up and running.

Investment Protection: Airband's service is based on industry standard protocols (SIP) that ensure your phones can take advantage of new features and applications as they are introduced – protecting your investment for years to come.

KEY BENEFITS

- Lower cost of ownership
 - Scalability
 - Reliability
- Investment protection

Why we do all this?

Because at Airband, we want you to realize the full potential of broadband.

To us, that means delivering voice service capabilities with the power and flexibility to meet your unique requirements.
